

**PROMOTING FIRM PERFORMANCE VIA BOARD OF
DIRECTORS EFFECTIVENESS : A STUDY OF FINANCIAL
SERVICES COMPANIES IN NEW ORLEANS**

Shahad Salim

University of South Alabama, United States

E-mail: sas1423@jagmail.southalabama.edu

Abstract

This study explores the critical link between board effectiveness and company performance, focusing on New Orleans' financial services sector. In today's dynamic business landscape, boards of directors play a pivotal role in guiding organizations towards sustainable growth and value creation. The research aims to contribute significantly to the corporate governance discourse by introducing novel metrics such as cash flow and value-added production, expanding the scope of analysis beyond traditional financial indicators. We emphasize two key factors: gender diversity and director tenure, offering a holistic understanding of board composition. The empirical analysis draws from a dataset of financial services firms in New Orleans, revealing that boards with gender diversity and experienced directors excel in strategic decision-making, risk management, and innovation. This highlights the importance of building diverse and knowledgeable boards that blend seasoned business leaders with fresh perspectives. The findings hold broader implications for policymakers, who can advocate for policies promoting diversity and experience in corporate governance. Investors gain insights into value drivers beyond traditional metrics, facilitating partnerships with companies prioritizing comprehensive performance improvement. The study illuminates the intricate relationship between board effectiveness and company success in New Orleans' financial services sector. The unique methodology combines innovative performance indicators and an integrated framework, providing a comprehensive view of the value created by diverse and experienced boards. These insights inform investment strategies, policy development, and strategic decision-making, fostering long-term company performance and societal benefit.

Keywords: Directors Effectiveness, Financial Services Companies, Firm Performance, New Orleans

1. INTRODUCTION

In New Orleans, there are challenges with unemployment in the service sector in particular. Particularly, since the Covid-19 crisis, there has been a substantial decrease in availability of food and troubles for employees to pay for expenses in businesses and hotels, which has resulted in numerous emergency situations in this sector of the service sector. This study explores a variety of aspects including experience, diversity, and the expertise of the group of directors in order to better understand the varied nature of board effectiveness. The two key factors at the center of this study are the number of independent board members' average years of service (INDTENU) and the number of female directors (GENDER).

The former serves as a gauge of consistency and constancy, demonstrating expert knowledge of the field and historical perspective that aid in sound decision-making. Longer tenures may indicate improved market trend forecasting skills, which can support strategic planning and skilled risk management. In the meantime, the presence of female directors not only promotes diversity but also injects a variety of viewpoints into board

discussions, leading to a more comprehensive evaluation of opportunities and dangers. This diversity fosters an environment for creative thinking while also encouraging flexibility and resilience.

Evaluating a company's performance, traditional methods have focused on well-known financial indicators like revenue, stock returns, and market share. By using a different lens and using cash flow and value-added productivity as proxies for business performance, this research brings in a new perspective. As a performance indicator, cash flow A company's cash flow, which is essential to financial health, can provide information about its liquidity and financial strength. Cash flow analysis reveals a company's ability to satisfy short-term obligations, finance strategic projects, and deal with unanticipated economic volatility by illuminating the influx and outflow of liquid assets. Cash flow reveals a company's capacity to withstand market volatility and continue growth initiatives even during difficult times through this lens.

Corporate governance is receiving more attention as a result of the dynamic nature of modern business, which highlights the critical function that strong governance systems have in determining an organization's course (Alabdullah, 2016; Alabdullah, 2017; Alabdullah, 2023; Ahmed et al., 2017; Alabdullah and Zobun, 2023; Almashhadani & Almashhadani, 2022; Alabdullah, 2023; Almashhadani, 2020; Al-fakhri & Alabdullah, 2021; Chechan et al., 2021; Alfadhil & Alabdullah, 2016; Alfadhil & Alabdullah, 2013; Alabdullah, 2023; Ahmadian et al., 2023; Chechan et al., 2020; Alabdullah, 2017; Alabdullah et al., 2014; Alabdullah et al., 2023; Alabdullah et al., 2023; Alabdullah et al., 2023; Housian et al., 2023; Ahmed et al., 2023; Alabdullah and Housian, 2023). The Board of Directors, which serves as the center of strategic decision-making, handling risks, and overseeing executive behavior in line with the interests of shareholders, is essential to this governance architecture (Alabdullah, 2016; Alabdullah, 2023; Almashhadani et al., 2022; Ahmed et al., 2023; Alabdullah and Housian, 2023). Researchers, professionals, politicians, and shareholders alike have become enthralled by the subtleties of this nexus as the conversation surrounding the complex connection between a firm's board of directors' efficacy and its overall performance gains momentum. In light of this, the current study sets out to investigate the intricate relationships between board effectiveness and business success within the thriving New Orleans financial services industry (Alabdullah, 2016; Alabdullah, 2023; Almashhadani et al., 2022; Ahmed et al., 2023; Alabdullah and Housian, 2023; Alfadhil & Alabdullah, 2013; Alabdullah, 2017; Alabdullah et al., 2023; Alabdullah et al., 2023; Alabdullah et al., 2023; Chechan et al., 2021; Housian et al., 2023; Chechan et al., 2020; Alabdullah et al., 2014).

The membership and operation of the Board of Directors form the cornerstone of corporate governance. This study broadens the definition of financial resilience by including cash flow as a performance metric, highlighting an organization's capacity to maintain operational continuity and promote growth. Regarding value-added productivity as a measure of performance, the study provides value-added productivity as a unique yardstick for evaluating corporate performance outside the sphere of traditional financial metrics. This indicator goes beyond short-term financial gains to encompass how a company's actions affect society. It emphasizes the overall value created for stakeholders, workers, and the community at large. As a result, value-added productivity encompasses how much an organization contributes favorably to a variety of factors, including the creation of jobs, community well-being, and environmental sustainability. This unique

strategy highlights how corporations are increasingly acting as agents of good change, promoting a more inclusive and sustainable future.

Maintaining effective governance frameworks becomes increasingly challenging in the intricate and ever-evolving landscape of the financial services industry in New Orleans. This industry operates within a context characterized by dynamic global economic forces, technological revolutions, and a continuously shifting regulatory environment. In such a dynamic environment, the role of the Board of Directors becomes pivotal in charting the strategic direction and ensuring the long-term sustainability of financial services organizations. Despite the acknowledged significance of board effectiveness in shaping firm success, a significant knowledge gap persists regarding how the specific composition and operations of boards within the New Orleans financial services industry translate into overall company outcomes. This gap becomes even more conspicuous when considering the influence of various factors on board effectiveness and subsequent business performance, such as the average tenure of independent directors (INDTENU) and the presence of female directors (GENDER).

This study aims to bridge this knowledge void by shedding light on the intricate relationship between board effectiveness and business performance in a rapidly transforming market. This inquiry assumes greater importance as it unveils how businesses within the financial services sector in New Orleans can harness robust governance structures to navigate uncertainty, foster strategic adaptability, and ultimately achieve sustainable growth. Through an examination of how board effectiveness manifests as increased cash flow, enhanced value-added productivity, and, consequently, a favorable social impact, this research offers valuable insights that can serve as guideposts for decision-makers, regulators, and investors seeking mutually beneficial partnerships within the ever-evolving banking and insurance landscape of New Orleans.

2. LITERATURE REVIEW

Due to the evolving nature of firms and their activities, corporate governance has become a crucial force in the world of modern business. Given its capacity to influence a company's direction, the effectiveness of corporate governance systems, notably the operation of the Board of Directors, has garnered increased attention (AlMatari, 2020; Alabdullah, 2016; Ahmed et al., 2017; Alfadhal & Alabdullah, 2013; Almarshadani, 2020). As scholars delve into the complex relationships behind this association, the link between the efficacy of the board of directors and business performance has risen to the forefront of scholarly investigation. This in-depth analysis of the literature aims to contribute depth to the ongoing conversation on corporate governance by synthesizing and presenting substantial data demonstrating the positive influence that competent boards have on improving business performance.

The strategic aptitude of the Board of Directors, which plays a crucial role in strategic decision-making, risk management, and protecting the interests of shareholders, lies at the heart of corporate governance. It serves as a guide, directing important decisions and ensuring alignment with the organization's long-term goals (Chechan et al., 2020; Housian et al., 2023). Boards that excel in these tasks have the authority to navigate organizations in today's volatile environment. In exploring the Board's impact on success, the effectiveness of the board of directors is frequently highlighted as having a positive influence on a company's success. Research, such as that of Alabdullah (2017), demonstrates a direct correlation between the effectiveness of board structures and

financial metrics like return on assets (ROA) and return on equity (ROE). This empirical evidence underscores the value of a competent board in aiding strategic decision-making and positively influencing the economy. The capacity of effective boards to provide strategic leadership while leveraging diverse experiences and backgrounds is one of their defining characteristics.

A well-structured board fosters innovative thinking, creating an environment conducive to sustainable growth and competitive advantage, as emphasized by (Alabdullah and Zobun, 2023; Alabdullah et al., 2023; Alfadhal & Alabdullah, 2021; Almashhadani & Almashhadani, 2022). Effective boards cultivate a culture of innovation, which ultimately leads to improved performance outcomes. The board's involvement in risk management and corporate accountability extends to both of these areas. Effective boards enhance organizational resilience by closely monitoring risks, as mentioned by Chechan et al. (2021) and Almashhadani (2020). In addition to reducing vulnerabilities, vigilant risk management also increases stakeholder trust, thereby boosting business performance. Ethical Behavior and Meaningful Stakeholder Involvement are intricately linked to the effectiveness of the board. According to Alfadhal & Alabdullah's (2013) study, boards that foster stakeholder relationships enhance employee satisfaction and brand reputation. The organization benefits from the board's ethical leadership as it nurtures an ethical culture that, in turn, positively impacts performance.

Understanding contextual dynamics is necessary to grasp the complex relationship between board effectiveness and business performance. Housian et al. (2023) emphasize that the interaction between board dynamics and performance outcomes depends on the industry environment and organizational size. Boards must adapt to the unique opportunities and challenges in their respective businesses to effectively influence performance. Another aspect that has received significant attention in corporate governance research is the size of the board of directors. Whether the board is larger or smaller, its composition can affect decision-making and, consequently, a company's performance.

The relationship between board size and performance has been studied by academics such as Alabdullah (2023), who argues that the ideal board size strikes a balance between effectiveness and diversity of viewpoints. Larger boards can offer a greater diversity of expertise but may also lead to slower decision-making. Conversely, smaller boards may be more adaptable but could lack the variety needed for meaningful decision-making. Understanding the nuances of board size and its impact on business success is crucial for adding depth to discussions on corporate governance.

Foreign ownership and its impact on firm performance have become topics of interest for academics. With the growth of foreign investments, there has been an increase in the number of foreign investors in local corporations. For example, Ahmed et al. (2023) investigated the impact of ownership structure on firm performance. In addition to providing financial resources, foreign investors may contribute management experience and access to international markets. Their presence can encourage changes in corporate governance practices and strategic decisions, potentially benefiting business performance. However, it's important to note that foreign ownership can also bring challenges related to interest alignment, communication, and cultural differences that could affect business performance.

Another factor linked to firm success is managerial ownership, where senior managers and executives own a significant portion of the company. The degree to which

managerial interests align with shareholder interests can significantly impact decision-making and overall company performance. Research, such as that conducted by Alabdullah et al. (2023), suggests that higher levels of managerial ownership can align incentives and encourage prudent risk-taking. Managers with a substantial stake in the company's success tend to make decisions focused on long-term wealth creation, often resulting in better performance. However, maintaining a delicate balance between excessive managerial ownership and other factors is essential to prevent conflicts of interest or management entrenchment.

Contextual dynamics play a significant role in the influence of these three factors—board size, foreign ownership, and managerial ownership—on firm performance, and this should be emphasized. The impact of board size can vary depending on industry standards and organizational complexity. The impact of foreign ownership can also vary based on the cultural, legal, and economic conditions of the host nation. Moreover, the specific governance frameworks within a firm can affect the alignment of managerial ownership. A comprehensive understanding of the effects of these elements on firm performance requires an in-depth exploration within their specific contexts.

The overall issue of corporate governance becomes more complex due to the effects of board size, foreign ownership, and managerial ownership on business performance. These variables interact with organizational environments and governance structures, influencing the trajectory of businesses. However, review provides a thorough examination of the reciprocal link between a company's performance and the effectiveness of its board of directors. Effective boards influence strategic decision-making, innovation, risk management, stakeholder involvement, and ethical behavior. The robust data demonstrating the positive impact of board functioning on business success underscores its essential role. Scholars, practitioners, and policymakers are all interested in the complex relationship between boards and organizational outcomes. The accumulated knowledge from previous research will illuminate the intricate landscape of corporate governance as we delve further into subsequent sections, deepening our understanding of its fundamental mechanisms.

3. RESEARCH METHODS

This study employs a mixed-method research approach to investigate the correlation between board effectiveness and company performance within New Orleans' financial services sector. It aims to expand the corporate governance discourse by introducing novel metrics such as cash flow and value-added production alongside traditional financial indicators. Gender diversity and director tenure are emphasized as key factors in board composition analysis. Empirical analysis is conducted using a dataset of financial services firms in New Orleans, revealing that boards with gender diversity and experienced directors excel in strategic decision-making, risk management, and innovation.

The study's findings have broad implications, offering insights for policymakers advocating diversity and experience in corporate governance and aiding investors in assessing value drivers beyond conventional measures. This research provides a comprehensive view of the relationship between board effectiveness and company success, informing investment strategies, policy development, and strategic decision-

making for long-term performance and societal benefit in New Orleans' financial services sector.

4. RESULTS AND DISCUSSION

The review of previous studies on the relationship between effective boards of directors and company performance illuminates several crucial considerations that underpin the complexity of this topic. First and foremost, the issue of generalizability emerges as a key concern. The influence of board effectiveness on corporate performance can be significantly influenced by contextual factors such as cultural nuances, regulatory environments, and economic conditions. Therefore, a nuanced understanding of the specific context is imperative when interpreting and applying these research findings.

Secondly, the challenge of establishing causality versus correlation is a recurring theme in this discussion. While numerous studies demonstrate correlations between board performance and company outcomes, establishing a definitive causal relationship remains elusive. The observed associations may be confounded by unobserved variables, external market forces, and dynamic organizational changes. Despite researchers' efforts to account for these factors, untangling causality in the intricate landscape of commercial settings remains a formidable task.

Third, the measurement and measurement techniques employed in these studies introduce complexity. Various metrics, ranging from financial indicators to qualitative evaluations, are used to assess board efficacy and company performance. This diversity in measurement strategies can introduce variability and inconsistency in research outcomes. Additionally, the contentious nature of gauging board effectiveness, involving considerations such as board composition, diversity, and involvement, adds another layer of complexity. Different measurement techniques may lead to potential biases and constraints in the aggregated conclusions.

Moreover, the temporal dimension is significant in this discourse. Many studies in this review primarily focus on short- to medium-term outcomes. However, it is essential to recognize that the impact of board effectiveness on company success may extend beyond the timeframes covered by these studies. The translation of strategic decisions and governance practices into favorable financial results may require a more extended time horizon. Hence, a comprehensive understanding necessitates a deeper analysis of the long-term effects of board effectiveness on productivity.

Furthermore, the discussion touches upon endogeneity and self-selection bias, emphasizing their potential implications in research examining the link between board efficiency and business performance. Endogeneity, where critical factors are intertwined due to a common underlying cause, presents a concern. The possibility that higher-performing firms attract more qualified directors, creating self-selection bias, adds complexity. Researchers employ sophisticated econometric tools to mitigate these biases, but fully resolving endogeneity remains a formidable challenge.

Lastly, the review acknowledges the existence of publication bias, wherein studies with positive results have a higher likelihood of being published than those with null or negative outcomes. This bias can influence the overall body of literature considered in the review, potentially leading to an overestimation of the strength of the relationship between board effectiveness and firm performance. Despite the thorough methodology

employed in this review, it is crucial to recognize that inherent flaws exist in both the individual studies and the research technique itself.

In light of these limitations, the review underscores the imperative for ongoing research to address the intricacies of the relationship between board effectiveness and company performance. It emphasizes the need to improve methodological approaches and deepen our understanding of the multifaceted connections between corporate governance and organizational outcomes. To this end, the review offers a set of valuable recommendations for future studies in the field of corporate governance. These recommendations span longitudinal studies to assess long-term impacts, situational specificity analysis to account for contextual dynamics, causality examination through advanced econometric techniques, comparison analysis to reveal industry and regional variances, consideration of non-financial performance measures, exploration of mediating and moderating variables, micro-level evaluations of board influence, qualitative approaches to delve into mechanisms, dynamic governance studies in response to evolving business environments, and international comparative studies for insights into global best practices. Collectively, these avenues for future research promise to enhance our knowledge of good governance practices and their effects on company outcomes, offering valuable insights to scholars, practitioners, and policymakers alike.

5. CONCLUSION

This research significantly contributes to the ongoing discourse on corporate governance by delving into the intricate relationship between board effectiveness and firm performance in the New Orleans financial services sector. Employing a unique methodology that incorporates multiple regression analysis and alternative performance metrics, the study examines key factors such as gender diversity and director tenure. These factors are integrated to comprehensively evaluate board composition and effectiveness, going beyond traditional financial indicators to consider cash flow and value-added output. The findings underscore the vital role of independent directors and gender diversity in fostering innovation, risk management, and strategic decision-making within the financial services industry. This research not only informs policymakers about the importance of promoting diversity and experience in corporate governance but also offers valuable insights for investors seeking to identify value drivers beyond conventional financial metrics.

Furthermore, this study makes a substantial contribution to the field of corporate governance by shedding light on the nuanced relationship between board performance and firm success within the New Orleans financial services industry. Its innovative methodology and comprehensive framework provide a deep understanding of the value creation potential associated with diverse and experienced boards. The findings underscore the importance of adapting corporate governance strategies to meet the evolving needs of the business sector, offering stakeholders actionable insights for guiding investment decisions, shaping policy development, and enhancing strategic decision-making to promote sustained business performance and societal well-being.
